Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Rosh is intrigued by numerical patterns. Today, she stumbled upon a puzzle while working with arrays. She wants to compute the sum of the third-largest and second-smallest elements from a list of integers. She seeks your help to implement a program that solves this for her efficiently.

Input Format

The first line of input is an integer N, representing the size of the array.

The second line of input consists of N space-separated integers, representing the elements of the array.

Output Format

The output displays a single integer representing the sum of the third-largest and second-smallest elements in the array.

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 10

10 20 30 40 50 60 70 80 90 100

Output: 100

Answer

```
import java.util.*;
class Main {
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        int N=sc.nextInt();
        int array1[]=new int[N];
        int array2[]=new int[N];
        int k=0;
        for(int i=0;i<N;i++){
            array1[k]=sc.nextInt();
            k=k+1;
        }
        for (int j = 0; j < array1.length - 1; j++) {
            if (array1[j] < array1[j + 1]) {
                int temp = array1[j];
                array1[j] = array1[j + 1];
                array1[j + 1] = temp;
                j = -1;
            }
        }
        int res=0;
        res=res+array1[2]+array1[array1.length-2];
        System.out.println(res);
    }
}
```

Status : Correct

Marks : 10/10
